

Technical Review Special Edition: Mitsubishi Hitachi Power Systems

Kenji Ando, President and CEO
Mitsubishi Hitachi Power Systems, Ltd.

Welcome to the special edition of our technical review featuring Mitsubishi Hitachi Power Systems, Ltd. (MHPS).

MHPS commenced operations over three years ago on February 1, 2014, following the integration of the thermal power generation system businesses of Mitsubishi Heavy Industries, Ltd. and Hitachi, Ltd.

While renewable energy is expected to become a leading sector in driving the power generation market over the long term, thermal power generation continues to play a key role in ensuring stable power provision and in addressing environmental issues.

In keeping with our mission to create a bright future for the planet, through our world-leading thermal power generation and environmental technologies, MHPS strives to offer outstanding products and detailed services that not only meet the expectations of our customers but also contribute to solutions for global energy and environmental issues.

To facilitate a deeper understanding of MHPS businesses and state-of-the-art technologies, this issue introduces a broad range of product technologies such as thermal power plant efficiency improvements, steam turbines with unrivalled capacities, high-efficiency gas turbines and their higher temperature capabilities, large-capacity turbine generators, high-performance boilers, advanced air quality control systems for thermal power plants, next-generation large-scale solid oxide fuel cells, and service-related technologies for enhanced customer satisfaction.

MHPS continues to engage in technology development in the fields of thermal power generation and environmental solutions to pave the way to a better future for society. We deeply appreciate your ongoing support and understanding in our quest.
