

Technical Review Special Edition: Environmental Initiatives

Hiroaki Takahashi
Head of Value Chain Headquarters

Welcome to the special edition of our technical review featuring Mitsubishi Heavy Industries' environmental initiatives.

In 2015, countries around the world adopted by consensus the Paris Agreement as the new framework to mitigate climate change and foster environmental resilience. In 2017, Japan's Government Pension Investment Fund (GPIF), the world's largest institutional fund, re-aligned its investment portfolio to include environment, social, and governance (ESG) criteria, a trend that has grown popular in Western countries. This reflects increasing international focus on the principles of a sustainable society and reduction of environmental impacts, along with the expectation that the private sector will play a meaningful role in this movement.

Our Basic Policy on Environmental Matters states that, in all aspects of its business activities, the MHI Group will strive to reduce environmental burdens and devote its comprehensive technological capabilities to the development of technologies and products that will protect the environment and thus contribute to the development of a sustainable society.

MHI's business domains operate with the goal of achieving Group-wide, universal environmental targets. In addition, our products are developed in line with our environment-friendly product fabrication guidelines for sustainability criteria we satisfy over the entire product life cycle.

This special edition introduces MHI's initiatives in this area, with a focus on our environmental measures as well as products and solutions developed for reduction and removal of environmental impacts.

We strive to further our knowledge and understanding of environmental issues in order to make an even greater contribution to the global community through our business activities and product development.
